

For Q&A tasks, fill your answers in the cell, or at least fill "A", "P" or "N" in all the "Your self-evaluation" cells.
A-all finished P-Partially finished N-None finished
If you mark the task "N", it receives 25% of max possible points for the task (It does not apply to extra-point tasks).
If you leave it blank, it receives 0 points.
If your mark the task "A" or "P" but zero work is done for the task, then it receives 0 points.
Please leave "score" cells blank for course staff
If your code does not build, your code will not receive more than 50% of max possible points

For Q&A tasks, fill your answers in the cell, or at least fill "A", "P" or "N" in all the "Your self-evaluation" cells.
A-all finished P-Partially finished N-None finished
If you mark the task "N", it receives 25% of max possible points for the task (It does not apply to extra-point tasks).

Task1: git and project structure	Max score (%)	Your answer/Your self-evaluation	1st pass: autograder (NA for the task)	2nd pass: manual review	final score
Your github repo should be named “CS371F21”;	10% total	Done			
Your github repo CS371F21 must be private, and you must add the instructor(jyuan2pace) as a collaborator;	missing any one - 5% missing two or more - 0%	Done			
All your work for this project should be placed under directory “project1”, which is immediately under repo CS371F21;		Done			
Design and answers for task 2 should be immediately under a folder called task2, immediately under project1;		Done			
Source code for task 3 should be immediately under a folder called task3 immediately under project1;		Done			
This grading sheet should be completed and shared with the instructor		Done			
			0		0
Task2: design and code review	Max score (%)	Your answer/Your self-evaluation	1st pass: autograder (NA for the task)	2nd pass: manual review	final score
Every class is shown in the class diagram	1	Done			
Correct/reasonable associations and attributes	2	Done			
Methods and attributes have proper type and type modifier (static, private, public etc)	2	Done			
Good practice of PIE	5	Unsure of what PIE means			
All unit tests are reviewed and commented with list states	10	Done			
			0		0
Task3: Implementation	Max score (%)	Your answer/Your self-evaluation	1st pass: autograder	2nd pass: manual review	final score
Is constructor implemented correctly?	5	Done			
Is allocate implemented correctly? Does it support -- first fit? -- best fit? -- next fit?					
Does it use list of free blocks and used blocks? and uses own list to split/delete blocks?	30	Done			
Is free implemented correctly? -- Does it compact free space? -- Does it give a nice error if you free a silly address? -- Use your own list to insert and consolidate blocks?	15	Done			

Is size implemented correctly?	5	Done			
Is max_size implemented correctly?	5	Done			
Is free and used blocks tracked using your own linked list ? -- Can your program output a list of used and free blocks in ascending order of offset ?	10	Done			
Does your implementation deviate significantly from the design (task2)?	[-5, -10]	Yes, after implementing the designs. My original assumptions were much different than I expected			0
